Dear Sir.

I have read with much pleasure your work on
Alcoholic Ferments and feel much interested in the particulars
you bring forcibly to the front. Kindly let me know what size of
bulb (Pasteur) you would recommend for experimental
[blyantsnote: 1/8 - 1/1 liter] purposes and what size for practical
working, that is to grow yeast for starting the fermentation in beer
wort say for 80 to 100 barrels at a time, please let me know where
the square glasses "avec petits carres" are to be obtained as also
the "chambre humid de Bottcher" and for Pasteurs bulbs both
sizes who are the best makers. Please,
thanking you in anticipation for the information now asked.
